

Dr. W. Patrick Danzey D.C.

After graduating from the National College of Chiropractic in 1983, Dr. Danzey has used flexion distraction in his practice in Avon Park, FL for 25 years and was constantly limited by the amount of traction he could provide to his patients before the standard tables would bottom out. To address these shortcomings, Dr. Danzey developed the Axial Trac™ hybrid table and now no longer faces these limitations.

AXIAL TRAC

TABLE

ENHANCED FLEXION DISTRACTION

AXIAL TRAC™

3 Tables in 1 • Up To Three Times More Traction in a Flexion Distraction Table

Manufactured by F&B Chiropractic, this table employs a new technology patented by W. Patrick Danzey, D.C. This table combines variable amounts of long axis (axial) traction with each flexion stroke. The hallmark of Axial Trac™ is a sliding upper pelvic section that is mechanically forced into distraction as the table is flexed. The traction handle is fixed to a non-sliding portion of the pelvic section so it does not move away from the doctor.

There are three electric motors; one for table elevation up to 32", one for spring tension and one to pre-select the amount of long axis traction. A multi-position headpiece is standard. Cervical drop, thoracic drop, lumbar drop and break away thoracic sections are available. Dr. Danzey has been utilizing flexion distraction for 25 years and realized the need for on demand additional traction. The technique is performed manually, allowing the amount of additional traction delivered with each flexion or lateral flexion stroke to be determined by

the doctor's feel and the patient's tolerance. Table calibration allows the doctor to record the amount of enhanced flexion distraction given on each visit. Axial Trac™ combines the best aspects of flexion distraction and spinal decompression in one multipurpose adjusting table.

The technique is highly specific allowing the doctor to target individual spinal levels and right or left sides. This is accomplished utilizing manual contact and lateral flexion. The design goal was to maintain this level of target site specificity while being able to deliver up to three times more traction than a conventional flexion distraction table.

TABLE SPECIFICATIONS:

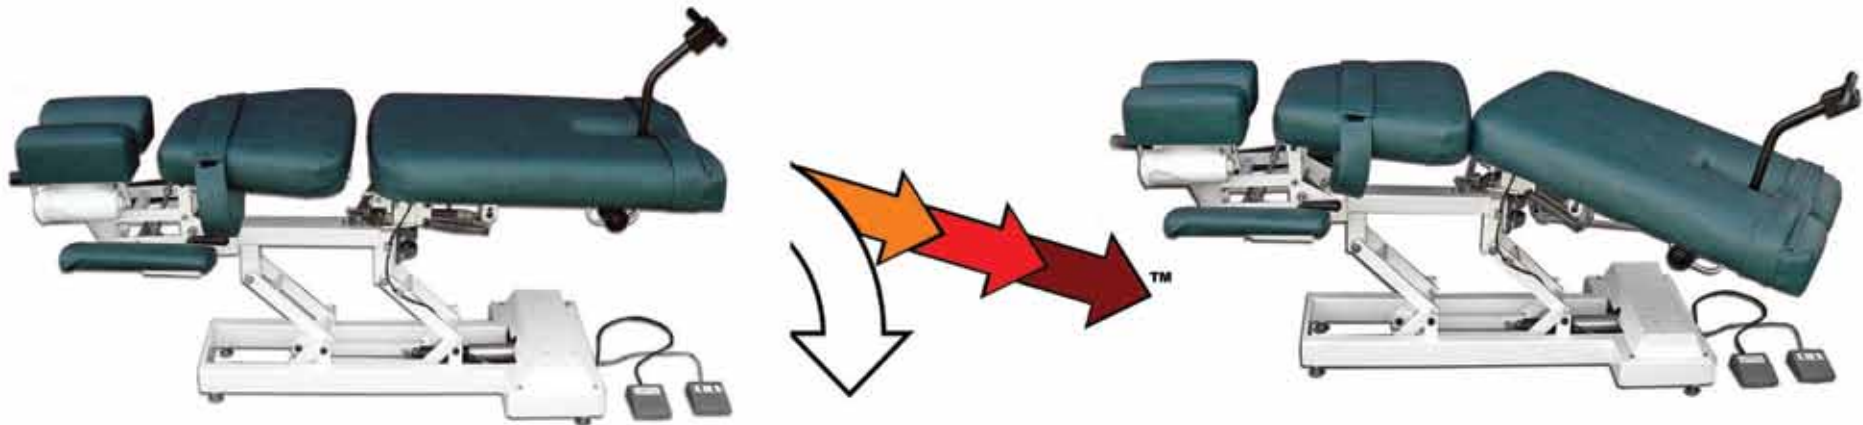

- Dimensions of table 73"L x 24"W
- Elevates from 22" to 34"
- Weight capacity 300-350 lbs.

FEATURES:

- Up to 3 times more traction
- More specific distraction
- Hands-on technique performed to patient's tolerance
- Electric foot controls for height, tension, and travel
- Multi-functional tilting headpiece
- Forward and Toggle Drop
- Optional lumbar, thoracic and pelvic drops
- Break-a-way section
- Naugahyde coverings
- Qualifies for ADA tax credit

	DOVER MIST
	HEATHER
	RASPBERRY YOGURT
	OXFORD WINE
	SUNSET
	FORREST
	TURQUOISE
	NAVY BLUE
